

Dear Commissioner Henney,

8/31/99

We're writing regarding two issues we learned of thru the Center for Science in the Public Interest: Irradiated meats and animal feed with antibiotics.

First, we believe consumers should be alerted that certain foods have been irradiated. This should be posted so we can choose to avoid them or specifically look for them, if we want.

Secondly, it is reckless to routinely feed animals antibiotic drugs; this will undoubtedly result in certain bacteria becoming immune or resistant to these drugs. We are already experiencing this in regard to humans--we do not need to exacerbate this problem further.
